

ABSTRACT

1 A writing-preventive device against computer viruses is electrically connected
2 with a BIOS memory chip, a real time clock chip, and a CMOS chip respectively so
3 as to prevent any data-writing action to any of the mentioned chips when the
4 writing-preventive device is enabled. Besides, the writing-preventive device is
5 mounted on a computer housing at a proper position for a user to reach and enable it
6 easily.
